

AIM

Prills™

AIM Prills™ are a unique, natural substance that allow you to produce your own AIM Prill Thin Water™—a unique water that will enhance your household water.

Instructions

1. Place your AIM Prills™ in a small pan of tap water and bring to a boil for a few minutes. This will sterilize the AIM Prills™ and remove any contaminants that may be present due to shipping and handling.
2. After sterilization, place the AIM Prills™ in a **glass**, one-gallon container. Fill this with water. You may use tap water, distilled water, or any other type of water.
3. Let the AIM Prills™ and water set in the container for 24 hours.
4. After 24 hours, your AIM Prill Thin Water™ is ready. You may redistribute this into other containers (including plastic) or pour it directly from the original container.

If you do not allow the level of your AIM Prill Thin Water™ to diminish by more than two-thirds, you may simply replenish it with ordinary water and let set overnight.

If you do allow the level of your AIM Prill Thin Water™ to diminish by more than two-thirds, refill the container with ordinary water and let set for 24 hours.

The only time reboiling the AIM Prills™ is necessary is if you believe your AIM Prills™ are no longer sterile.

Uses

Mix the AIM Garden Trio™ products or AIM Herbal Fiberblend™ with your AIM Prill Thin Water™. Doing so “reactivates” the powders more thoroughly than regular water, resulting in a better-mixing and better-tasting experience!

Use AIM Prill Thin Water™ as drinking water.

Spray the AIM Prill Thin Water™ on your face and other body parts for soft and smooth skin.

Effectiveness

The AIM Prills™ have been shown to be effective for at least three years and should maintain their effectiveness for an indefinite period of time. Your AIM Prills™ should make thousands of gallons of AIM Prill Thin Water™. Enjoy!
